People's Fuel, a worker owned cooperative based in San Francisco, California, is dedicated to providing communities with increased access to sustainably sourced, locally produced, tested and ASTM certified biodiesel.

Since 2004 fleet managers from a variety of cities and companies have utilized our expertise to transition their fueling infrastructure to clean, renewable biodiesel. We can develop a quality control and maintenance program designed specifically to meet your needs and ensure a smooth fleet implementation.

With more than 34 years of combined biofuel industry experience we offer professional background and expertise in engineering, design, construction, education, market development, and business management.

Successful fleet conversions to biodiesel include:

- * PG&E
- * City of San Francisco
- * SF Public Utility Commission
- * SF Bay Railroad
- * North Bay Construction
- * Hurricane Hauling
- * Building Resources
- * Sacramento Biodiesel Network
- * Hidden Villa Ranch

Not all biodiesel is created equal. Special care must be taken to analyze and certify all fuel is of the highest quality and meets ASTM standards. We feel it is also important to evaluate fuel on a sustainability standard as well. When sourcing sustainable fuel, verifying quality is absolutely critical. Fluctuating feedstock, developing producers, new processes, and small batches are some of the factors affecting fuel quality. Constant vigilance from People's Fuel assures that the fuel you use meets the highest quality standards.

Below are some ideas on how People's Fuel can help any fleet, large or small complete a smooth transition to biodiesel.

Fleet Conversions Services:

- * Understand alt fuel background info
- * Fleet manager trainings and presentations
- * Choosing quality fuel
- * Selecting appropriate blend
- * Review engines compatibility
- * Maintenance and warranty
- * Access to fuel supply
- * Fuel sampling
- * Storage and handling practices
- * Understanding quality control
- * Buying from certified vendors
- * Review existing fueling infrastructure
- * Select appropriate upgrades
- * Cold temperature operations
- * Develop pilot program
- * Monitor and evaluate
- * Verify best fueling maintenance and operation practices
- * Identifying engine shut downs and tank issues
- * Review existing fueling infrastructure and upgrade as necessary for biodiesel
- * Fleet wide evaluation and report
- * Marketing your success

We hope you will consider the industry expertise and strategic relationships People's Fuel offers. Together we can establish a scope of work that meets your needs. Contact us today to schedule a fleet training or answer your questions about biofuels and your fleet.

We appreciate your interest in and efforts towards creating a cleaner, greener future for us all.

Sincerely,
The Peoples Fuel Team
